EDUCATION

SRM Institute of Science and Technology, Kattankulathur

B.Tech, Computer Science and Engineering — CGPA: 9.35/10

Expected 2027

Chennai, TN

City Montessori School

Class XII, CISCE (PCM) — 91.25%

2023

Lucknow, UP

City Montessori School

Class X, CISCE — 95.8%

2021

Lucknow, UP

EXPERIENCE

TalenciaGlobal

Jul 2026 – Present

Software Development Intern

Chennai, India

- Architected the core **agentic** company-intelligence engine: a **LangGraph** orchestration graph that fans a single research request out to 9 parallel domain-specialist agents (identity, HR/culture, financials, leadership, tech, risk/compliance, GTM, brand, web presence), each grounded via an **AgentCore** web-search gateway and **AWS Bedrock** model calls, to populate a 164-field company schema.
- Designed a 3-model judge-consensus layer that re-evaluates low-confidence schema fields across independent **Bedrock** calls before persisting to **PostgreSQL** — a deliberate reliability check against single-model hallucination in unstructured web-sourced data.
- Built the platform's backend architecture end-to-end: async job queueing, a **RBAC** policy-and-middleware layer enforced on every request, and notification/email services, exposed via **FastAPI** to a **Next.js** dashboard.
- Integrated the independently-built **Sales Executive**, **Company ATS**, and **College Admin** workspaces onto the shared Researcher backend — merging them onto one **RBAC**-enforced deployment so all four roles authenticate through, and draw company intelligence from, the same core engine.

Xenkrypt Technologies

Dec 2025 – Mar 2026

Backend Developer

Chennai, India

- Core contributor to **Sentrix**, a self-hosted **SOC** platform unifying 10 security disciplines — **SIEM**, endpoint, network, **IAM**, cloud posture, AppSec, **SOAR**, **GRC** — behind a single **FastAPI** backend and **Go** endpoint agent.
- Owned the **GRC** module end-to-end plus a standalone **grc-risk-engine** microservice — risk scoring, risk scenarios, asset register, and attestation workflow — deriving **ISO 27001** compliance, directly from live scan findings and telemetry rather than manual uploads.
- Built the **Perimeter Security** module (firewall rule management, asset inventory, **MITRE ATT&CK** technique mapping, alert timeline) with its corresponding executor in the **Go** endpoint agent.
- Delivered the initial **IAM** feature set, integrating **Keycloak**-managed identities behind a **Casbin RBAC** permission layer enforced across all 10 modules.

PROJECTS

Sentrix | FastAPI, Python 3.12, Go, Next.js, PostgreSQL, Elasticsearch, Redis, Keycloak

Jan 2026 – Mar 2026

- Team-built open-source **SOC** platform (~10 modules) unifying **SIEM**, endpoint, network, **IAM**, cloud posture, AppSec, **SOAR**, and **GRC** behind a single API.
- Architected as a modular monolith: each module owns an isolated **PostgreSQL** schema, router, and service layer; **asyncpg** on the hot path with **ARQ/Redis** background workers for long-running scans and backups.
- Built the core **IAM** module: integrated **Keycloak**-managed identity behind a **Casbin RBAC** permission layer enforced across all modules, covering user provisioning, role assignment, and access-policy evaluation on every request.
- Built the **Perimeter Security** module end-to-end — firewall rule management, asset inventory, **MITRE ATT&CK** technique mapping, and a live alert timeline — plus the corresponding executor in the **Go** endpoint agent that enforces rules on managed hosts.
- Designed the compliance model to derive **ISO 27001** control evidence directly from live telemetry and scan findings, eliminating a manual evidence workflow that drifts from reality.

SystemLens — Local AI Ops Agent | Python, asyncio, Docker SDK, SQLite, Ollama, Groq

[August 2026 - Present]

- Built a locally-run **AI agent** that watches multiple Docker Compose projects' logs in real time and produces evidence-grounded root-cause findings; a 6-stage async pipeline (watch → parse → cluster → correlate → rate-limit → analyze) runs concurrent projects on one **asyncio** loop with blocking Docker/filesystem I/O offloaded to threads.
- Separated deterministic reasoning from **LLM** narration: a 6-rule correlation engine (connection-target resolution, recent-exit and OOM detection, health-check failures, Compose dependency-chain walking, prior-resolution memory) performs all causal inference, while the **LLM** only ranks and explains supplied candidates under a strict JSON schema.
- Engineered a post-hoc evidence-sanitization layer that verifies every quoted string in model output against what the model was actually shown, automatically downgrading verdicts on fabrication — closing the primary hallucination vector for this class of tool.

SafePath — AI Safety Companion | Flutter, Dart, Python

Dec 2024 – Jan 2025

- Built a cross-platform **Flutter** mobile app that scores route safety against local crime-incident data, weighting candidate routes by reported incident proximity to recommend a lower-risk path.
- Implemented one-tap and voice-activated **SOS** alerting that notifies a pre-set list of emergency contacts, and an anonymous, unauthenticated incident-reporting flow so users could flag unsafe locations without creating an account.

TECHNICAL SKILLS

Agentic AI & LLM: LangChain, LangGraph, MCP (Model Context Protocol), Multi-Agent Orchestration, RAG, Prompt Engineering, LLM Evaluation
Languages: Python, Java, C++, C, Rust
APIs: FastAPI, REST APIs, WebSockets
Frontend & Mobile: React, Next.js, Flutter, Tailwind CSS
Cloud & DevOps: Docker, Kubernetes, Nginx, Linux, Git, CI/CD

CERTIFICATIONS

AWS Certified Solutions Architect – Associate Amazon Web Services	Apr 2026
AWS Certified AI Practitioner Amazon Web Services	Mar 2026
AWS Certified Cloud Practitioner Amazon Web Services	Mar 2026
AI Engineer Agentic Track: The Complete Agent & MCP Course Udemy	

ACHIEVEMENTS

Honorable Mention, **MozoHack** (SRMKZILLA), Apr 2025
Special Mention, **DAYZERO** (CodeNex), Apr 2025

LANGUAGES

English (Professional Working Proficiency), Hindi (Native)
